Creating transformational impact with measurable outcomes

A Fully Integrated Asset Management Platform

Infraon Asset Management is a one-stop platform for SMEs, large enterprises & telecom companies to manage asset lifecycles.

Infraon Asset Management – monitor & manage all your IT & non-IT assets

Tracking siloed asset lifecycles can be a brutal journey. It eats up all your time - from using hundreds of spreadsheets to dealing with multiple vendors.

Infraon Asset centralizes asset management by giving you full control with a single powerful platform. You can optimize asset usage, increase asset lifetime, improve deployment, and ensure total. Eliminate spreadsheet dependency with a low-code platform that helps you unearth potential costs, make smart purchasing decisions, and avoid unnecessary expenses.

What sets us apart?

Infraon Asset Management comes with an interactive UI-friendly dashboard that provides real-time tactical insights. Track critical financial, compliance & legal needs while measuring overall asset ROI. You also get access to an inbuilt incident & fault management system – with multi-channel support and self-service options like chatbots.

Improve asset availability & performance

- ✔ Streamline asset lifecycles – from requisitions to replacement & retirement
- ✔ Transform asset data into actionable business insights
- ✔ Establish remote user verification protocols to mitigate risks
- ✔ Track IT & non-IT asset locations – anytime, anyplace

Key highlights

- ✔ Rapidly "scan/search" all inventory endpoints
- ✔ Set least-privilege access privileges to prevent security threats
- ✔ Monitor all asset licenses from a single location
- ✔ Trigger alerts based on unique rules
- ✔ Intuitive dashboards for an up-to-date picture of the entire lifecycle of assets.
- ✔ Customizable, interactive reports for on-the-go analysis and in-depth understanding.

One platform to unify asset management

Managing multiple assets in multiple environments can be expensive, time-consuming, and ineffective. Centralize your software, hardware & IT asset lifecycle management - using the agent-based model or going agentless.

Maximize IT & non-IT asset ROI

Your asset spending, maintenance, and upkeep must be based on your unique business goals. Understand near-accurate costs on replacement, refurbishment, end-of-life, and more to show ROI to finance teams.

Go spreadsheet-less with a UI-friendly dashboard

Dealing with spreadsheets is the silent nemesis of many small-sized businesses. Equip your teams with KPI-led dashboards that offer spreadsheet-free information on every part of the asset's journey in your organization.

Integrated ITSM capabilities

Traditional IT support is ineffective in dealing with modern application issues and new user expectations. Use no-code ITSM workflows with a drag-and-drop UI to easily manage incidents, problems, changes, releases, etc.

Licensing

Infraon Assets has a simple asset-count licensing model wherein the cost of managing a single laptop, router, switch, firewall or server is the same.

Sl No	Features	Essential (Prev-Standard)	Standard (Prev-Professional)	Professional (New)	Enterprise
1	Hardware Asset Management	Yes	Yes	Yes	Yes
